MONTHLY REPORT MAY 2026

Key metrics, storage economics, and product progress - monthly snapshot

USAGE VOLUMES CT3

CT3 Monthly Report May 2026: key metrics for Public and Enterprise Cloud, community momentum, storage economics, and product progress. Metrics are calculated using a transparent methodology and are supported by on-chain data

Upload statistics

- Enterprise (63.5%)
- Public Cloud (36.5%)

- Total Uploaded **10.08 PB**
- Avg daily throughput **67.8 TB/day**

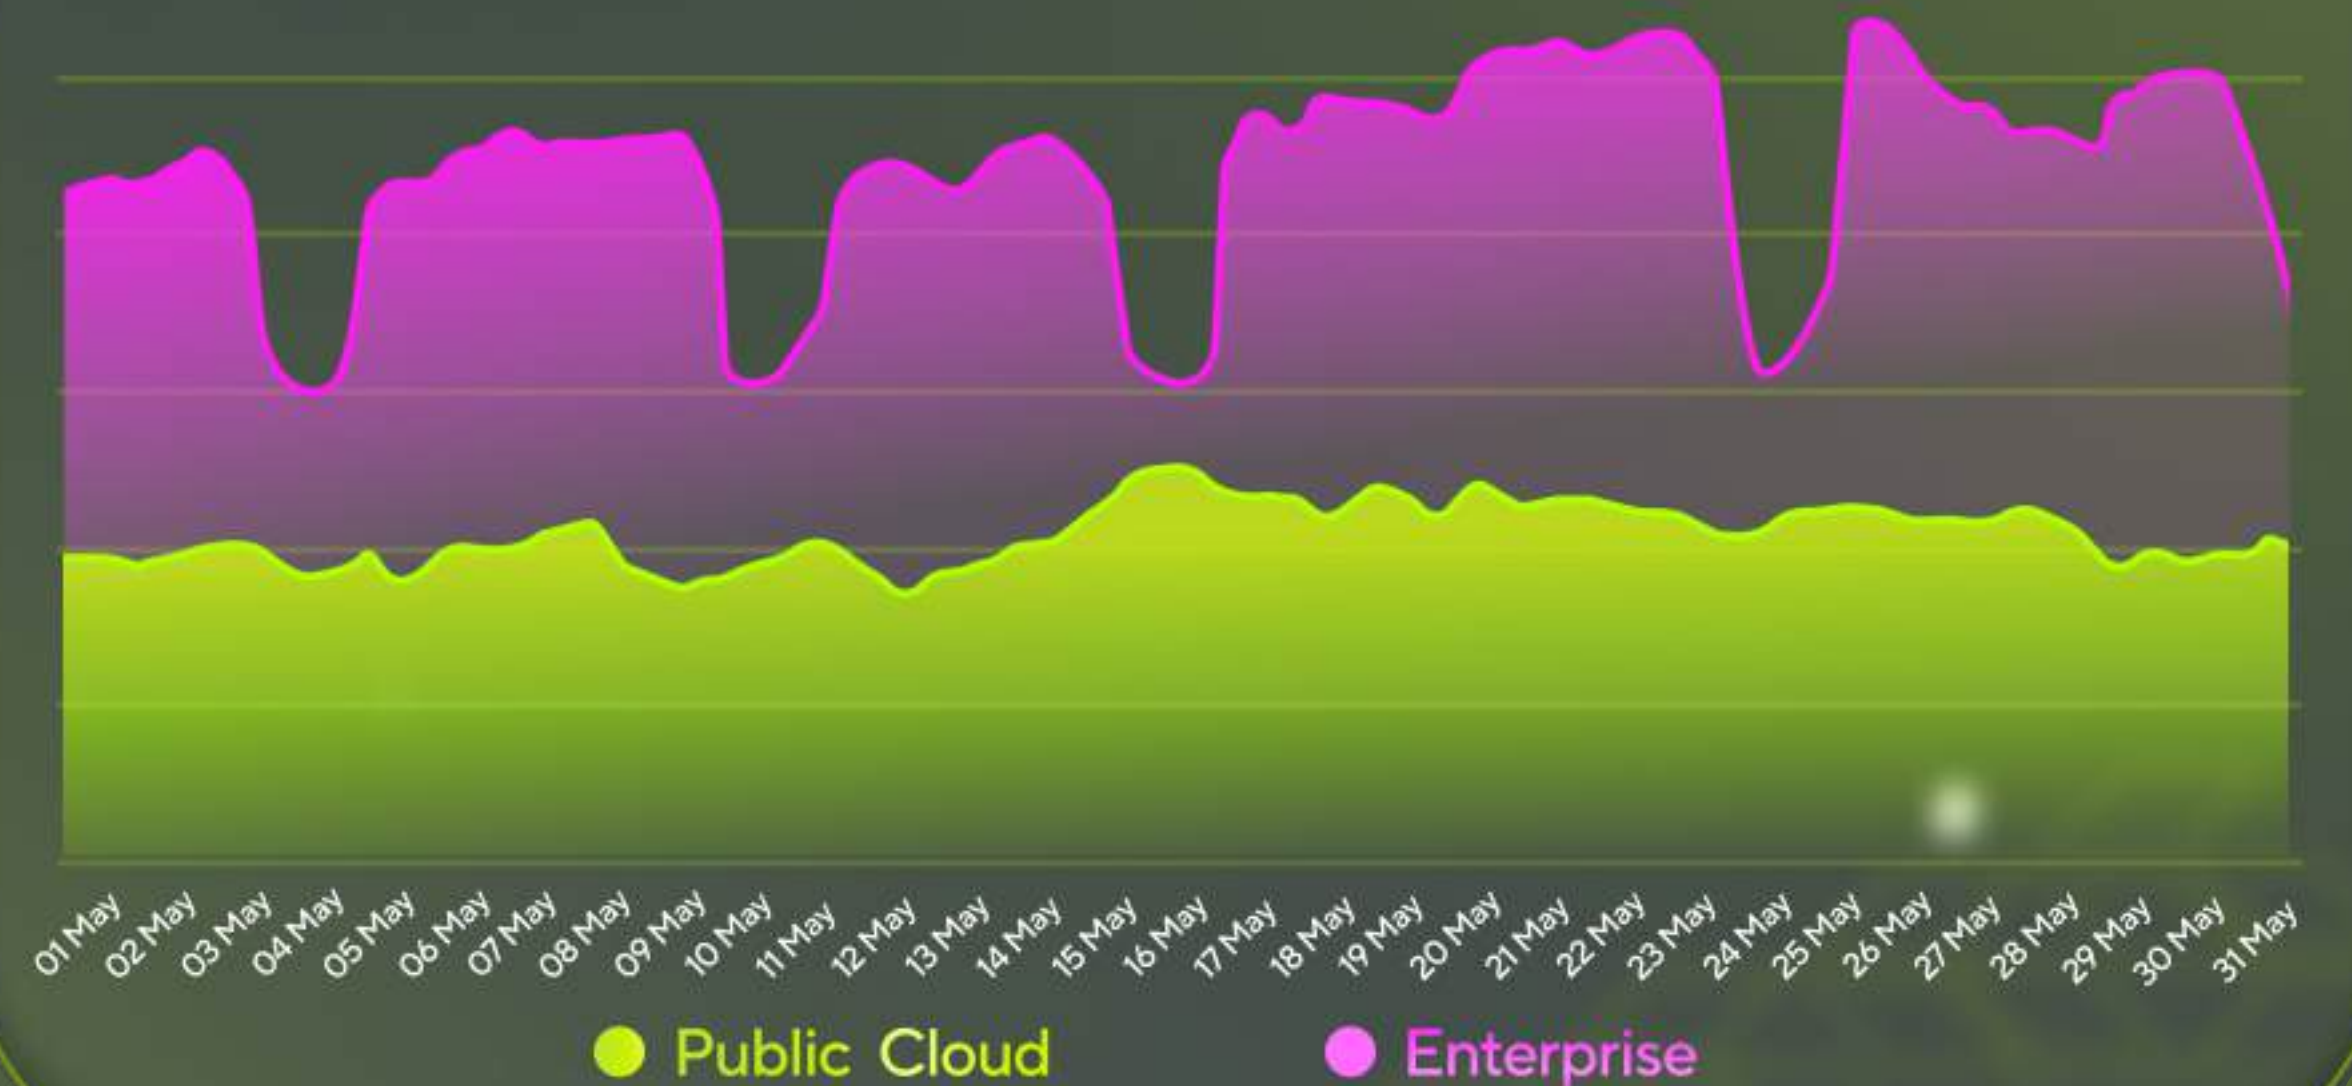

Public Cloud

Private uploads **3.46 PB**
Unique users **101 203**
Files uploaded **296 721**
Avg daily throughput **25 TB/day**

Enterprise

Enterprise Uploads **6.62 PB**
Corporate clients **13**
Avg daily throughput **43 TB/day**

Daily uploaded volume

During May, there was steady growth in upload volumes from both individual and corporate users. Platform activity maintained a consistent positive trend, reflecting the gradual expansion of service adoption and increasing demand for CT3 solutions

EXPANDED ANALYTICS CT3

Upload success rate

Public Cloud 99.12%
Enterprise 98.6%

p95 upload throughput

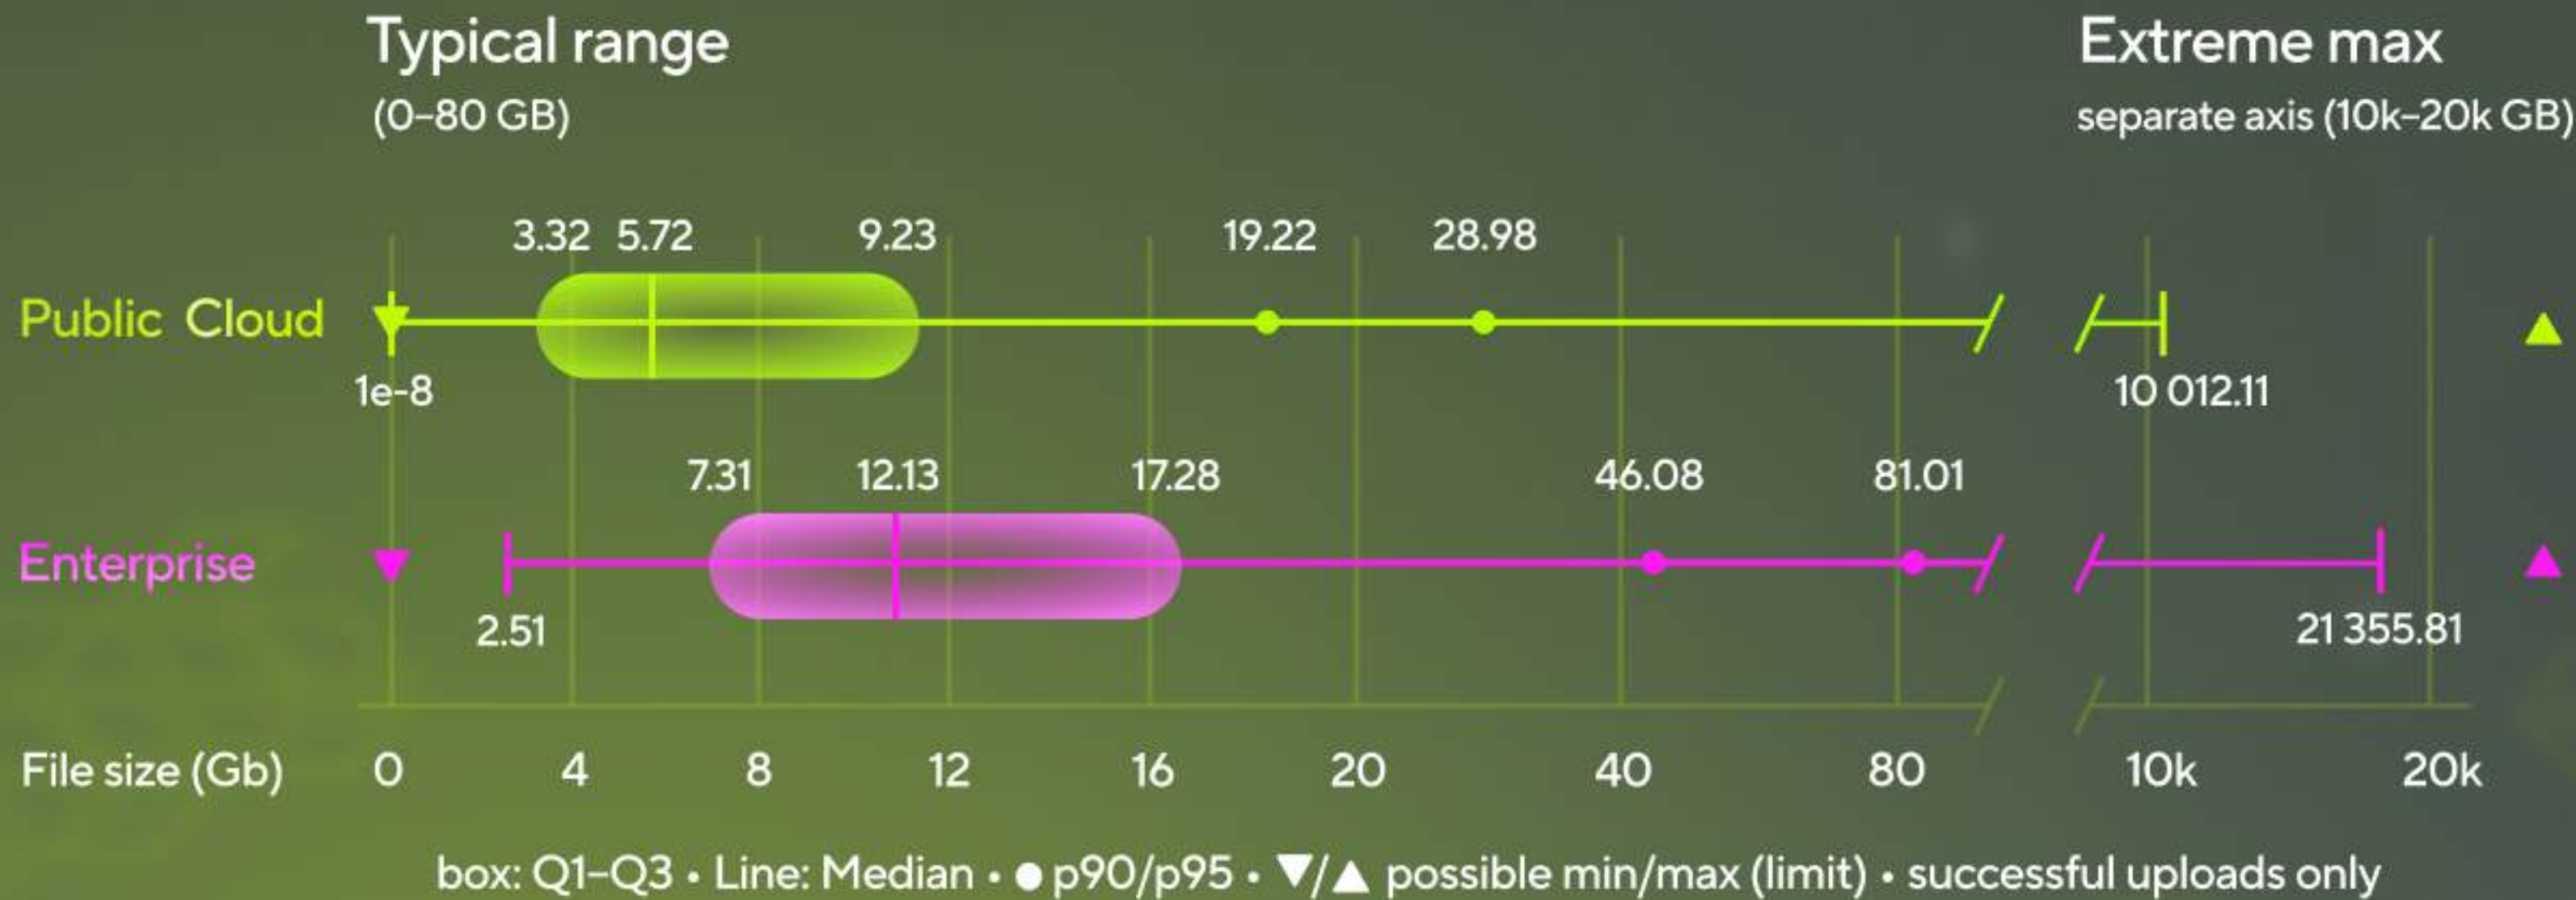

Public Cloud 16-26 MB/s
Enterprise 39-75 MB/s

Top failure reason

Timeout: 42%
Payment issues: 29%
Node unavailable: 6%
Other: 23%

File size profile (distribution) 01- 31 May 2026

Private repeat usage

● Returning (2+ uploads) 84%
● New uploaders 16%

ENTERPRISE CONTRACTS & ACTIVITY **CT3**

Enterprise snapshot

Total enterprise contracts	13
New contracts this month	+1
Enterprise uploads	6.02 PB

Enterprise upload throughput

New enterprise contracts

Anavig Limited

Segment: Real estate • **Region:** UK • **Contract term:** 6 years

Storage type: Hot storage • replication ×3 • controlled access

Company activity: The company operates in the fields of real estate and consultancy, including the purchase and sale of its own real estate, the leasing and management of owned or leased real estate, as well as the provision of consultancy services related to management, business development, operational efficiency and strategic planning.

The company's core activities are focused on acquiring, owning, developing, managing and commercially utilizing real estate assets, including residential, commercial and investment properties. The company may also provide consultancy services to other organizations and private clients on asset management, business processes, investment planning, project development and improving operational efficiency, excluding financial management.

ECONOMICS & MONETIZATION CT3

Miner price (Gb/day)

Min	\$ 0.000030
Max	\$ 0.000040
Average	\$ 0.000035

User price (Gb/day)

Min	\$ 0.00047
Max	\$ 0.00053
Average	\$ 0.0005

Effective storage cost

Min	\$ 0.00006
Max	\$ 0.00008
Average	\$ 0.00007

Pricing spread (USD/GB/day) 01- 31 May 2026

Drivers & notes

- Cost drivers on the supply side: miner raw 1× pricing, replication overhead (×2), and supporting infrastructure/operating costs (gateways, metadata, monitoring) collectively determine effective storage cost, the pricing spread, and overall unit economics
- Fourth month scaling phase: as user activity and total storage demand continued to expand, CT3 preserved stable end-user pricing while improving infrastructure performance, strengthening monitoring processes, and enhancing operational reliability under growing network load

COMMUNITY PULSE CT3

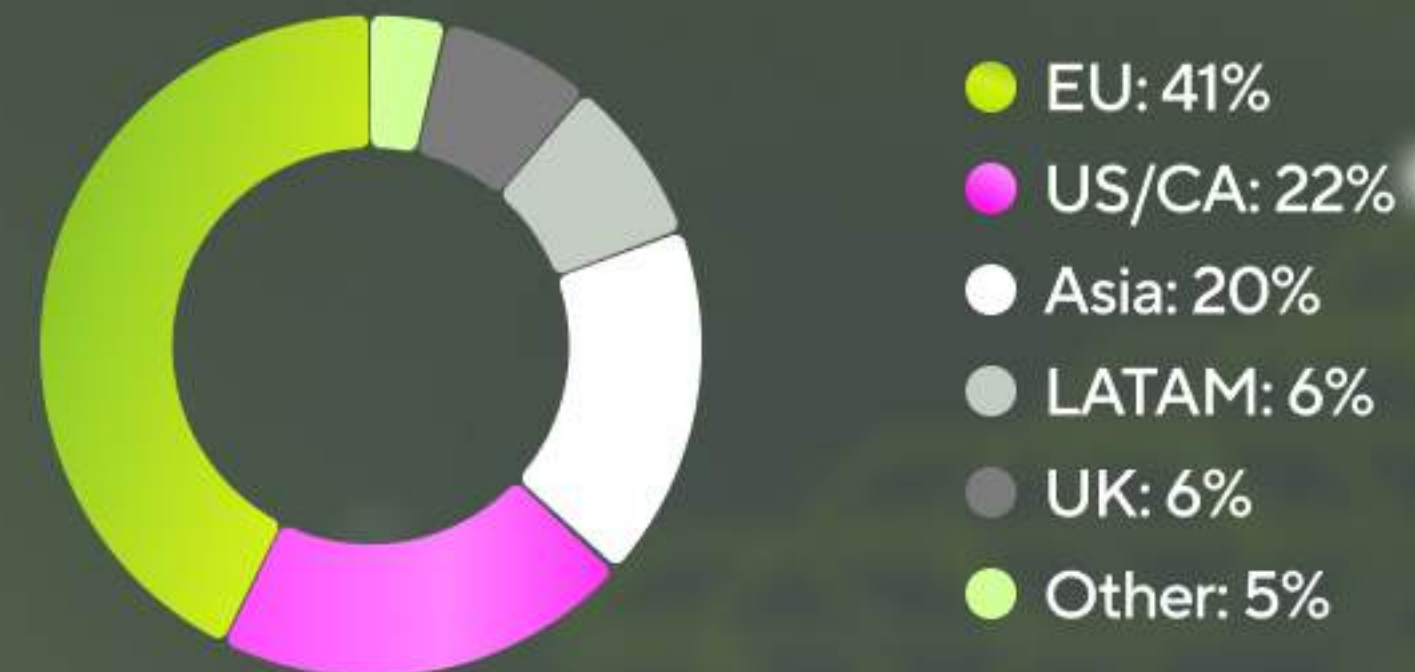

CT3 Storage usage growth 01- 31 May 2026

Social follower growth 01- 31 May 2026

Download statistics 01- 31 May 2026

* This chart shows the geography of our **social media followers**, not storage users. We can't provide storage-user geography because we only see the wallet addresses receiving the NFT access keys, and those addresses don't contain any geolocation data

COMPANY NEWS **CT3**

CT3 Secure Storage: Over 215,000 Files Uploaded

04 May 2026

The total number of uploaded files on CT3 Secure Storage has exceeded 215,000

Other news 01- 31 May 2026

CT3 April 2026 Report is Now Available

12 May 2026

April highlighted continued enterprise expansion through new long-term telecom and network services contracts, while CT3 also improved infrastructure stability and operational efficiency during active scaling. The report further reflects growing international reach, broader media visibility, and increasing real-world demand across the ecosystem

Automatic Backup System Development Completed

20 May 2026

We have completed the automatic backup page, and the feature will soon become available to platform users. The system will automatically create backups, distribute them across decentralized nodes, verify data integrity, and support fast recovery if part of the network becomes unavailable.

The page is now in final internal testing. After limited early access, automatic backups will gradually become available to all users.

(MoM*)

+22.5%

Community growth
(MoM*)

-1.2%

Stored volume growth
(MoM*)

+10.09%

User price volatility

4.4%

Month conclusion

CT3 continued to strengthen the platform's core activity throughout the month, with a stronger focus on long-term data storage as users increasingly selected extended retention periods. This shift highlights growing demand for reliable decentralized infrastructure designed not only for active file storage, but also for durable data preservation. As long-term storage remains a key driver of the platform's economics and potential revenue generation, continued growth in extended storage volumes represents a positive signal for the long-term development of the ecosystem.

Next month focus

Next month, CT3 plans to concentrate on the development and rollout of automatic backup technology, which represents one of the most important infrastructure use cases for the platform due to its relevance for long-term data protection and reliable decentralized storage. The main objective will be completing the testing and optimization phase, expanding early access, and preparing the automatic backup system for broader availability among platform users.

* MoM (Month-over-month) - is a metric used to measure short-term growth
